

Strada

Back photos

Firstly, have horse standing reasonably square, on a flat surface (not downhill or uphill).

Take photos from each side - near & off.

Take photos from behind, looking towards the wither, including the neck & ears is fine. Try to have the horses neck as straight as possible.

(jpg files are preferred, of a reasonable size and clarity.)

Muscle wastage

If you feel muscle wastage is a factor with your horses back, standing near the horses hip, take photos of the shoulder/wither area for both sides, even if you include the horses neck, head and ears.
